

Clinicians – plot fundal height at each visit from 24 weeks

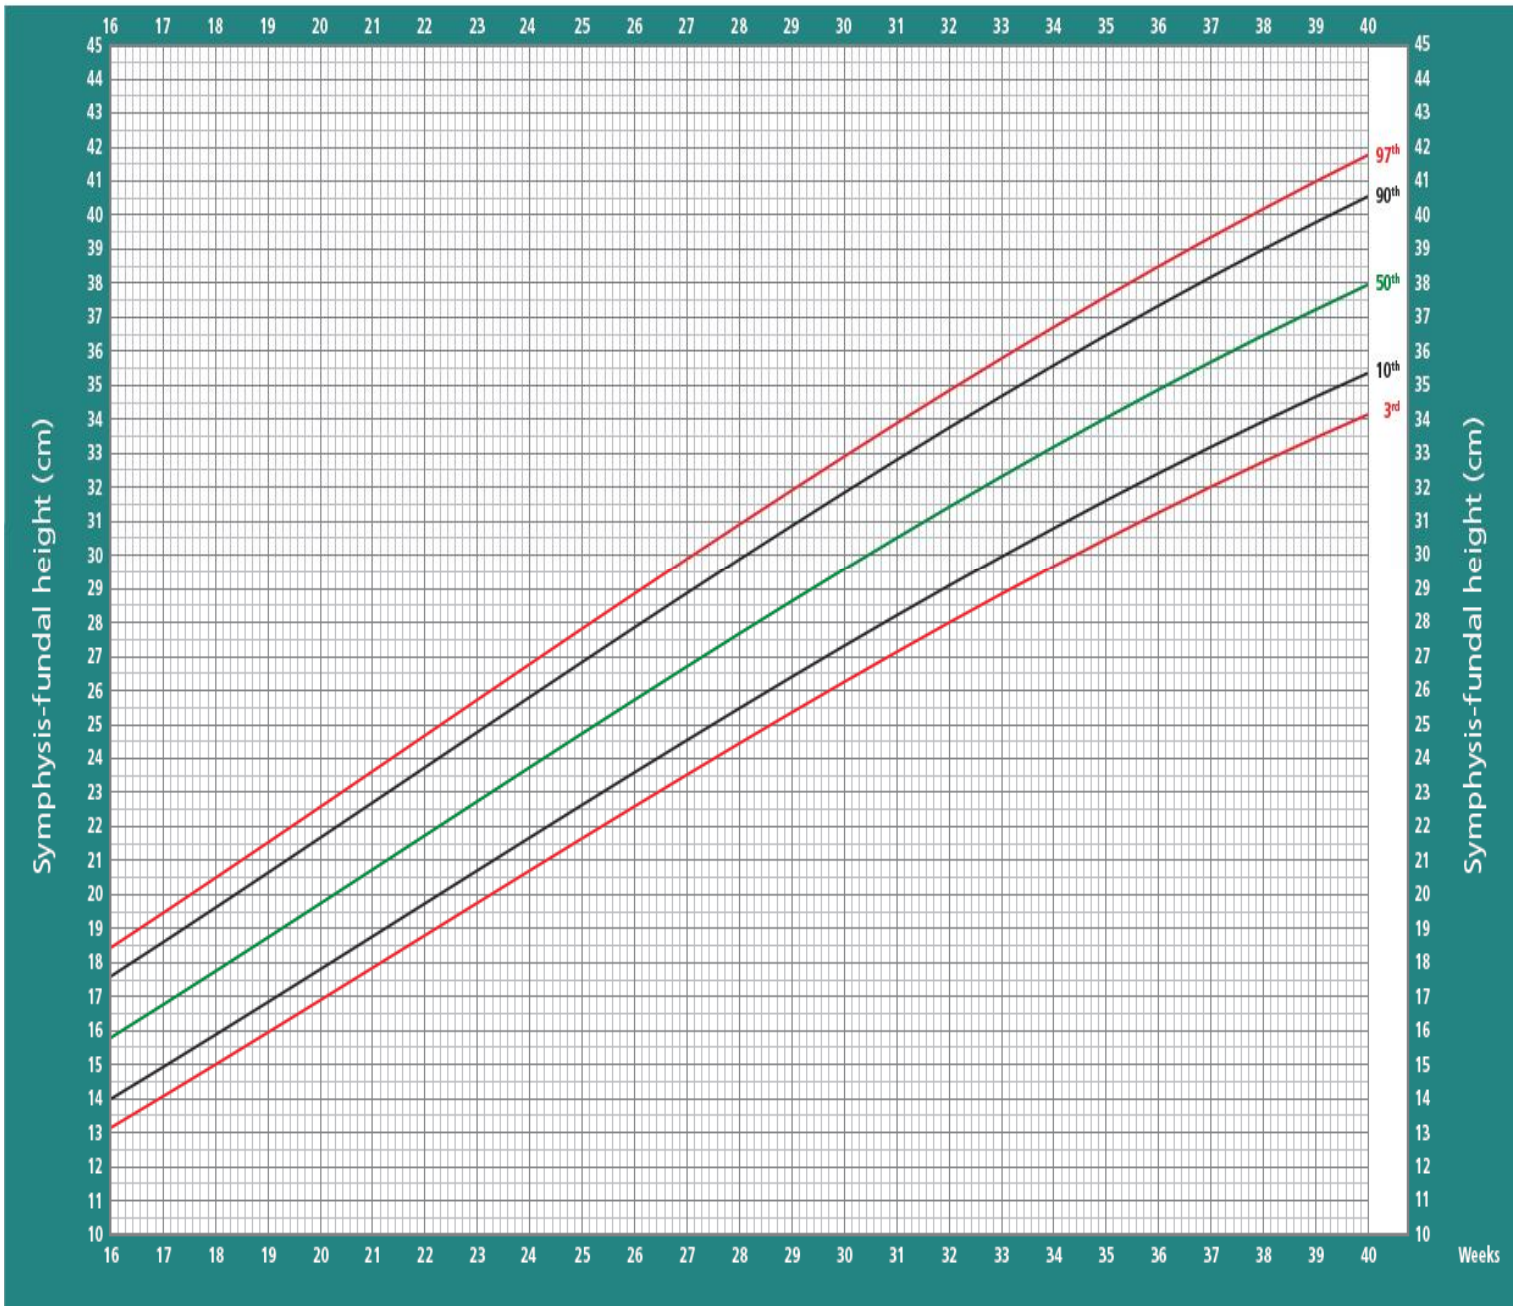

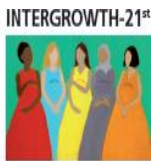

SFH Measurement:

- BMI 18-40 measure SFH at every visit from 24 weeks
- If SFH measurements are reduced, or show slow or static growth on serial measurements, refer the woman for US assessment of fetal growth
- BMI \geq 40: use serial US assessment to monitor fetal growth (Maternity ehandbook –Obesity during pregnancy, birth and postpartum)

For women having serial growth Ultrasounds- Plot EFW and AC on graphs
